COMENIUS PROJECT SO ECO GREEN

Local Agenda 21, Budapest 11th district

The Local Government does not have a Local Agenda 21, but is has other plans and actions as it follows:

Plans and Actions www.ujbuda.hu

Environmental education:

- competition organized for schools and kindergartens involving parents also (collecting rainwater for watering, making a small garden and grow vegetables, making and using bird tables, drawings, photos)
- Kamaraerdő study path (booklet)
- Sas Hill study path (http://dinp.nemzetipark.gov.hu)

Environmental protection:

- selective waste collection in institutions
- selective waste collection for local residents (flier)
- composting (free compost boxes and bags)
- biking, walking (flier with shops in the area)
- using recycled paper
- organizing defoliation, cutting of branches in the area
- spring and autumn cleaning in the district (cleaning of parks, green areas, collecting litter)
- lumber removing (twice a year, free for residents, leaflet)
- reduce consumption of water in institutions (using special water filters)
- rubbish dump (cleaning illegal waste deposits)
- cutting ragweed
- smog alarm (Budapest City Council) together with AIRCE (air-quality and quantity of the measured pollutants) automatic station in Kosztolányi Square

Renewable energies

- together with the Energy Club- Intelligent Use of Energy booklet about renewable energy sources, reducing energy consumption, modernization of heating systems)
- use of solar power (Local Council Building)

Problems:

Environmental problems:

- pollution and noise
- rubbish dumps

Economic problems

- unemployment
- small shops close down because owners are unable to pay the high rent, and because of the lower prices of hypermarkets and shopping malls

Social problems

- homeless people in parks, streets
- no flats/houses for rent (for people who cannot afford to buy)

Cultural problems

- few cultural activities /fewer participants (expensive)
- less/no financial aid by the government
- cultural institutions close down

Mechatronikai Szakközépiskola - Plans and Actions

- selective waste collection (batteries, plastic bottles)
- paper collection
- saving the chestnut trees
- Environmental day Dönts! Competition
- building a heat collector from beer cans (project week, with the help of electrical engineering teachers)
- cleaning an area in Törökbálint, a small town 10 km from Budapest
- posters
- reduce water consumption (waterfilters)
- eco-theatre
- examination of Danube water (pollution level, composition)
- small garden for spices
- waste material dress
- planting trees
- painting Saturday (classrooms, benches, chairs)-students, parents, teachers
- fence painting
- use of material rest (patchwork bag and crochet-work mobile holder)

School subjects to deal with sustainability

Geography Chemistry

History (the industrial revolution, technical development, pollution of the environment, globalization, emphasize the importance of protection of the environment, of the Earth; international collaboration of different institutions and organizations for a better world for future generations) Social sciences (the individual and his environment, the importance of ecological approach, the influences of human activity on climate changing, the consequences of global warming)

Literature: the Bible- responsibilities of man

Ethics: protection of the environment

Form-teacher's lessons: What can you do?, organizing different competitions on the topic, volunteer work to clean/paint/decorate the classroom, etc.

The Hungarian Society for Environmental Education is working on a new ("green") curricula.
